

Abstract

Seal Apparatus (Fig. 2, 4)

5 A seal (40) provides sealing between two pressure
zones (60, 62) and a rotating and non-rotating member (42,
52) by providing a first sealing member (46) between two
seal lands (48, 50). A second seal (64) is mounted between
the non-rotating member (52, 58) and one of the seal lands
10 (50, 66) so as to control pressure around the seal lands
(48, 50).
